COMMENTS				
I can see the whole team did a good work, I only have few comments regarding running the code, it didn't run from the very first time because you tried to required the comments router file in index.js line 5 and the file starts with capital C not lowercase c ... it should've been capital C .. this error may not be triggered on WindowsOs but on MacOs and Linux the filesystem is case sensitive so it will crash ... you need to be careful when requiring a file to mention the exact file path with the exact uppercase or lowercase letters .... I also want to point out a very important thing here, you guys are expecting to have 2 different types of forms SPC and SSC ... each form would have different fields, so the form is dynamic and there is no static fields known to you and you should start thinking about a good way to handle the dynamic forms and how to store them in the database ... this is very important ! Nice work everyone, cheers
